

# SCARECROW

motion activated sprinkler

**Chases animals  
out of your garden.**

*The Scarecrow is a clean alternative to smelly, poisonous, or visually disruptive repellents. It is widely endorsed and less expensive than physical barriers. If you've tried other solutions that failed, you're ready for a Scarecrow. Entering its fourth year, it is now more economical, effective and widely available than ever.*

*Animals run when Scarecrow sees them!*

*Just hook up  
to your  
garden  
hose, plug  
in the  
battery and  
point it over  
the area to be protected. It's  
that easy.*

*Tens of thousands of homeowners worldwide now use this award-winning solution to quickly, economically and safely repel animals.*

*All it takes is a couple cups of water from the fast acting Scarecrow for cats, dogs, deer, rabbits, raccoons and most other animals to high-tail it!*

## **How it works**

Scarecrow senses animals the same way security lights detect people; movement and heat. When an animal is seen, a valve opens instantly releasing a three-second pulsating spray of water. The combination of the sudden noise, movement, and water frightens animals away. This startling, yet harmless action is a remarkably effective deterrent.

## **Scarecrow Accolades**

Making the Retailers' Choice Awards and their Top 100 New products of the year humbles us. Being selected as a Best of the Year by the Gadget Guru humbles us as does being recommended by the National Home Gardening Club membership; having our brochures distributed by hundreds of Humane Societies; being included in books, magazine articles, online discussions and everyday conversation on TV or radio. We are humbled by what we have and strive to do it justice every day. Please tell us if there is anything we can do better.

## Installation

It's easy! Just install the battery, hook up the garden hose and plant the stake in the ground.

## What it needs

9-volt battery power and a hookup to a garden hose. Battery life is measured in the THOUSANDS of 'activations'. As a rule Scarecrows easily last through an average summer's use.

## Optional Mounting Bracket

We've developed a bracket that can take the place of the supplied stake. It allows a Scarecrow to be positioned high or low with excellent adjustability to view exactly the spot you want to watch over. Comes with screws and instructions. Its part number CRO-200.

## Specifications

Black and green components. The unit is constructed from lightweight durable ABS and glass-reinforced nylon components. The head can be detached from the stake to enable mounting higher using an optional mounting bracket (CRO-200 ).

## Decals

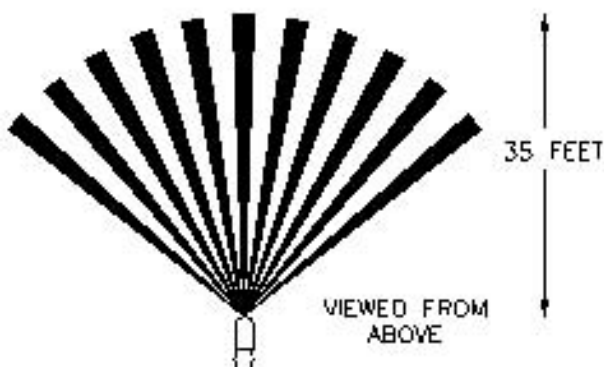

Beak and eye decals are included with each unit to brighten up the Scarecrow and give it personality. Avoid applying if using near bird feeders which attract small birds. While the Scarecrow's water will effectively repel an unwanted cat, the visual effect of the eyes may inadvertently scare the birds away.

## Coverage

Up to 1000 square feet can be covered by one Scarecrow. A 35 foot deep and 45 foot wide 100 degree sensor detection zone provides plenty of garden protection.
