

Zon Cannon Mark 4

존캐논 제품은 50여 년간 농작물 지역 및 공항 등 지역에서 유효조속 퇴치에 성공적으로 널리 활용되고 있는 세계적인 제품이다.

The Zon Mark 4 Propane Cannon provides a single pressure regulated sonic blast to frighten and disorient pest birds & wildlife.

*폭발음 볼륨 조절가능 (100-125 데시벨)

* 개스(Gas)를 작동시키고 원하는 폭발음 간격(대략 40초에서 최대 30분)으로 조절기(regulator)를 설정하면, Zon Mark 4 cannon 이 스스로(unattended) 작동한다.

* 표준형 20파운드(약 9kg) 프로판 탱크로 약 17,000 회의 폭발음(Denotatoons)을 발생시킨다.

* 1대의 Zon mark 4 캐논은 지형이나 지세에 따라 약 1200-6,000 평(1-5 acres)을 Cover한다.

* 4 피트(약, 1.2m) 삼각대 (Zon Tripod)의 설치로, 각 폭발음마다 약 60도씩 Zon Mark 4 캐논이 360도 회전하게 되어, 서로 다른 방향에서 폭발음을 발사하여 보다 광범위한 지역을 Cover할 수 있다.

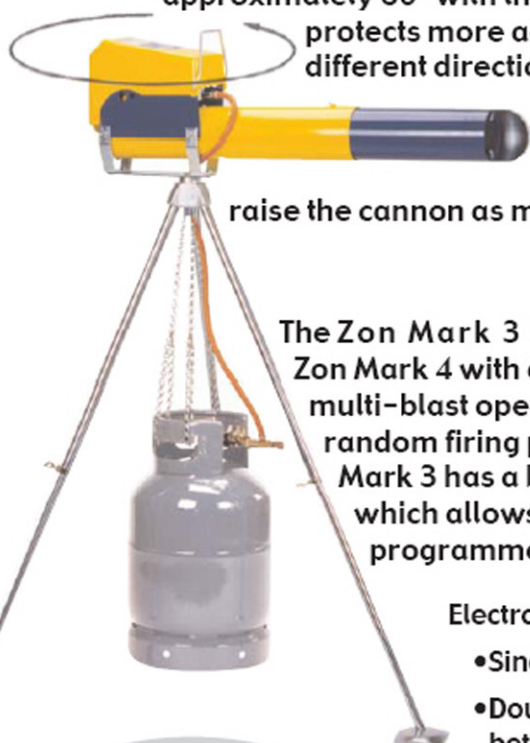

The Zon Mark 4 Propane Cannon provides a single pressure regulated sonic blast to frighten and disorient pest birds & wildlife.

After setting the regulator at the desired blast interval (from 40 seconds to 30 minutes) the Zon will operate unattended. Blasts are generated by readily available propane gas. A standard 20 pound tank will provide approximately 17,000 detonations. The volume of the blast is adjustable from 100 - 125 decibels.

The Tripod Assembly elevates the Zon ~4' high and allows it to rotate approximately 60° with the impact of each blast. This protects more acreage since each blast is in a different direction from the last.

For taller crops, Tripod Extension Kits can be added to raise the cannon as much as 4 additional feet.

The Zon Automatic Timer allows you to set a daily on/off time, so the cannon will run unattended until the propane tank needs refilling.

The Zon Mark 3 Electronic Propane Cannon enhances the features of the Zon Mark 4 with an electronic control module that allows for multi-blast operation (up to 3 blasts per cycle), and random firing patterns. The Zon Mark 3 has a built-in on/off timer, which allows the cannon to be programmed to fire only when needed.

The Zon Mk. 3 requires a 12 volt battery and a 20 lb. propane tank (sold separately).

Electronic Zon multi-blast options:

- Single (blast interval is set with separate control)
- Double or Triple (under 10 second interval between blasts)

Electronic Zon random firing options:

- Short Interval - blast(s) will fire unpredictably between 1 and 4.5 minutes apart.
- Medium Interval - blast(s) will detonate unpredictably between 2 and 9 minutes apart.
- Long Interval - blast(s) will detonate unpredictably between 3 and 13.5 minutes apart.

CANNON REPAIR SERVICE

We offer an economical propane cannon repair service for Zons Mark 2, 3, and 4. The average repair job ranges from ~\$50 - ~\$125 per cannon (includes parts and labor), depending on condition of cannon. A standard repair job includes: diagnosis of malfunction, replacement parts as needed, pressure test of regulators, lubrication of wear and rub points, alignment of the tripping mechanism, and a test firing of the cannon to ensure proper blast interval and operation.

RENTAL PROGRAM

If your pest bird problems are seasonal, take advantage of the savings with our bird control rental program. Propane Cannons (& accessories) and Bird Gard Super PRO (standard version) units are available for rent.

Used equipment from our rental program is also available for sale at reduced pricing.
